

Do you know what's in your nearest body of water?

FUTURE POLICY

NLGN

Happy first of December!

This week we have a wide range of topics for you: research conducted abroad could have implications for public transport around the world; and technology helps local government and citizens in places as big as South Africa and as small as Vanuatu. Technology is also helping to improve health in Canadian communities, and we also have some inspiration from the private sector on the many ways to capture innovation to facilitate transformations.

We hope you have a good weekend!
